

## Advantages

1. Central Administration
2. All Telephone calls from one location
3. Full mobile and hand portable radio roaming (between both sites). Radios can call each other by using I.D. regardless which of the two areas they are located.
4. All call logs and user data are available from a single location

**Note: if a link is broken between the 2 sites then site 2 will continue to work independently BUT without telephone access. Additionally, Logging data or user updates for site 2 will not occur until the link is restored.**
