

Site ONE

SmarTrunk System - Option THREE

Site TWO

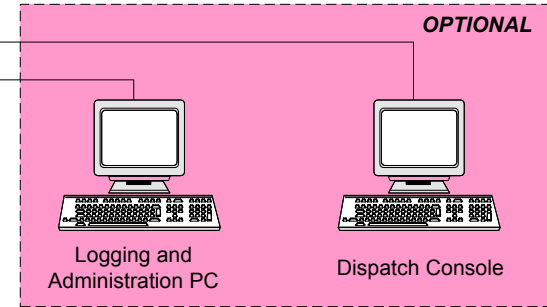

Microwave (2 or 4 wire) - 4 Duplex channels required
Private Wire (2 or 4 wire) - 4 Lines required.
(these circuits to be supplied by customer)

Advantages

1. Central Administration
2. All Telephone calls from one location
3. Full mobile and hand portable radio roaming (between both sites). Radios can call each other by using I.D. regardless which of the two areas they are located.
4. All call logs and user data are available from a single location
5. Full LIVE (real-time) Network Traffic Monitoring
6. Optional Central Dispatch Console
7. Primary equipment is located at HQ or control
8. All Call logging and user data is stored at HQ or control and not at remote site
9. Easy system management.

Note: if a link is broken between the sites then the remote sites will continue to work independently BUT without telephone access. Additionally, (central) logging data or user updates for the remote sites will not occur until the link is restored.

Control at Headquarters

Nabishi UK Ltd
